

## BCA IG XRF meetings – what's in it for me?

### Look forward to:

- Interesting short talks
  - From arsenic in stuffed birds to Stonehenge bluestones
  - From Rolls-Royce turbine blades to canal dredgings
  - From ppb to percent

### That's only the start:

- Networking
  - Meet other analysts
  - Exchange problems
  - Pick up hints and tips

### Your boss will like:

- Experts with diverse experience to waylay
  - Old hands (committee and delegates), always delighted to debate XRF
  - In fact it is often difficult to stop them!
- State-of-the-art XRF instrumentation to weigh up
  - From hand-held to high performance
  - New developments in the technique – lower levels and increased precision
  - Attended by all the major manufacturers supplying the UK and Europe
- Not forgetting the preparation and support stuff
  - Equipment to save your lab money - presses, mills, fluxers, platinum ware
  - Training and application notes
  - Reference materials
  - Consumables

### I want to come – when and where?

**12<sup>th</sup> May 2010 at the British Geological Survey, Keyworth, Nottingham**

**A one day meeting in association with the RSC Atomic Spectroscopy Group**

### And finally:

- Combine XRF with the **XRD meeting on 13<sup>th</sup> May 2010** at the same venue
- Go to <http://ig.crystallography.org.uk/xrf/xrf.htm> for all the details
- How about joining in and giving a brief talk on what you do?

**See you there!**
